

Bebbo App - Windows Setup Guide

This guide documents the setup and build process for running the Bebbio parenting app on a Windows machine using React Native CLI.

Prerequisites

Make sure you have the following installed:

- Node.js v21.7.3

```
node -v
```

- npm v10.8.2

```
npm -v
```

- Java JDK 17

```
java -version
```

- React Native CLI v0.72.5

```
npx react-native -v
```

- Android Studio

- Installed with SDK Manager

- NDK version: 25.1.8937393

- Emulator setup or physical Android device connected with USB debugging enabled

Initial Project Setup

1. Clone the Repo

```
git clone https://github.com/UNICEFECAR/parenting-app-bebbo-mobile.git
```

```
cd parenting-app-bebbo-mobile
```

2. Install NPM Dependencies

```
npm install --legacy-peer-deps
```

3. Generate Vector Images

```
FLAVOR=bebboDev npx react-native-vector-image generate
```

4. Create Environment File

Copy content from env.bebboDev into:

```
env/.env.bebboDev
```

Android Setup

1. Configure Local Properties

```
sdk.dir=C:\Users\YOUR_USERNAME\AppData\Local\Android\Sdk
```

2. Set Correct NDK Version

Ensure ndk/25.1.8937393 exists under the SDK path.

Build & Run (Bebbo Dev)

Run Metro Bundler

```
FLAVOR=bebboDev react-native start --reset-cache
```

Generate APK

```
cd android
```

```
ENVFILE=../env/.env.bebboDev FLAVOR=bebboDev ./gradlew assembleProdstagingRelease
```

APK location:

```
android/app/build/outputs/apk/prodstaging/release/app-prodstaging-release.apk
```

Install APK on Device

```
adb install -r android/app/build/outputs/apk/prodstaging/release/app-prodstaging-release.apk
```

If you face signature mismatch:

```
adb uninstall org.unicef.bebbodev
```

Then install again.

Known Windows Issues

- sdkmanager not recognized:

```
& "C:\Users\YOUR_USERNAME\AppData\Local\Android\Sdk\cmdline-tools\latest\bin\sdkmanager.bat"
```

```
"ndk;25.1.8937393"
```

- NDK source.properties error: re-download correct NDK version.

- Build taking long? Clean build:

```
cd android
```

```
./gradlew clean
```

Notes

- Do not use yarn.

- Use the correct environment file and flavor (e.g., bebboDev).
- Run Metro first before building APK.
- Make sure adb is in your system path or use it from platform-tools.
